Challenge Name: Transformer – 200pts

On his GitHub, I see each and everything but not get anything then I got the URL for his LinkedIn profile, so I directly visit there.

As here I got his real name as Suryansh Deshwal, now I search for the computer hostname.

In his posts, in one post I got one video where her explain some basic security stuffs as one internship task. In the middle of this video, I see him typing the hostname of his computer and I got the answer.
